

Sustainability work, *made useful.*

Practical support for growing teams that need to organise carbon data, answer sustainability requests and build reporting workflows they can keep using.

A FOCUSED INDEPENDENT PRACTICE

Measure. Respond. Prove. Simplify.

Small scopes, clear finish lines and usable handovers - led by Daksh Mehta in Paris, working in English and French.

CARBON BASELINES

VSME + ESG EVIDENCE

WORKFLOW SPRINTS

A practical market gap

between reporting pressure and delivery.

The demand signals are strongest where smaller companies must turn scattered operational information into evidence that customers, banks and procurement teams can use.

VSME

A common language

The European Commission recommends the voluntary SME standard to simplify sustainability information requests from large companies and financial institutions.

920

French carbon diagnostics

Bpifrance reported 920 Diag Decarbon'Action engagements in 2025, despite a five-month pause in availability - a clear signal of sustained SME demand.

30%

Suppliers without carbon data

EcoVadis and Accenture report that 30% of suppliers provide no emissions data to buyers; only 21% provide detailed activity-level data across Scope 1, 2 and selected Scope 3.

POSITIONING CHOICE

Not another broad strategy deck.

A reliable operating layer.

Mehta Impact Studio focuses on the gap between knowing what should be reported and getting the data, owners, evidence and repeatable process in place. That is a narrower offer - and a more credible place to start.

Four focused ways to help *without overbuilding the project.*

01 MEASURE

Carbon baseline & action map

A first inventory across Scope 1, Scope 2 and priority Scope 3, with assumptions and data gaps made visible.

- + Data request and boundary workshop
- + Documented calculation workbook
- + Hotspot view and action backlog

02 RESPOND

VSME & ESG evidence pack

A compact information pack for sustainability questions from customers, banks and larger value-chain partners.

- + VSME-aligned gap review
- + KPI and evidence register
- + Clear company sustainability profile

03 PROVE

Ratings & questionnaire readiness

Structured preparation for EcoVadis-style assessments, client RFIs and supplier questionnaires.

- + Requirement and evidence mapping
- + Answer library and ownership map
- + Submission-readiness review

04 SIMPLIFY

Sustainability workflow sprint

A short project to replace scattered files and repeated follow-ups with a clear process and lightweight automation.

- + Process map and ownership
- + Practical tracker or dashboard
- + Handover and team walkthrough

Small scope. Clear finish line.

1

Frame

Agree on the decision, deadline and evidence that matter.

2

Build

Work with the data and people already available.

3

Hand over

Leave a documented system the team can own.

ONGOING OPTION

Fractional sustainability operations

Monthly support to maintain the evidence base, coordinate contributors, update KPIs and keep reporting work moving.

EXPERIENCE BEHIND THE STUDIO

97th

percentile EcoVadis result at CEVA Logistics after a 12-point improvement

15+

sustainable procurement KPIs reported weekly at Thales

2026

CSR Report delivered at Dataiku alongside GHG data coordination

Results above come from Daksh's roles inside the organisations named, not studio client case studies.
